Does ASEAN have technology options to decarbonize power sector?

Faced with energy transition objectives, the ten countries of the Association of Southeast Asian Nations (ASEAN) have technology options to decarbonize power sector. This study investigates the hypothetical decarbonization pathways for ASEAN's power sector.

How can the ASEAN Power Grid facilitate investments in renewables?

To facilitate investments in renewables in ASEAN, it is critical to overcoming the barriers in renewable energy legislation, energy governance, and business environment. 28 Cooperation through the ASEAN Power Grid brings economic benefits to the region as a whole, and thus improves the affordability for energy transition.

Does ASEAN have a power system capacity expansion model?

Here, we present an integrated power system capacity expansion model for ASEAN over 2018 - 2050. The results provide hypothetical pathways to decarbonize the ASEAN power sector while meeting the projected electricity demand by strategically pursuing renewable energy, carbon capture and sequestration, and cross-border transmission grids.

What is the power mix in ASEAN?

While fossil fuels dominate ASEAN power mix (accounting for 76%), hydroelectricity infrastructures are well developed in the region, providing 17% of the electricity. Other renewables account for the remaining 7% of the electricity production.

Objectives of ASEAN: Political and Security Cooperation: ASEAN's goal is to promote regional peace and stability by encouraging political and security ...

Focusing on regional energy interconnection, clean transition, investment and financing, and technology
