How many b/d does Venezuela refine?

According to IPD Latin America estimates, Venezuela's refinery throughput has been less than 300,000 b/d, or roughly one-fifth of its nameplate capacity.¹⁷ Venezuela has worked with Iran to supply fuel as well as refining materials, spare parts, and technicians to restart the refineries.

How much oil does Venezuela produce in 2023?

Despite the sizeable reserves, Venezuela produced 0.8% of total global crude oil in 2023. Most of Venezuela's proven oil reserves are extra-heavy crude oil from the Orinoco Belt.

Will Chevron be able to produce crude oil in Venezuela?

Much of Venezuela's crude oil production capacity and infrastructure have suffered from a decade-long lack of capital and regular maintenance. Chevron's earlier exemption increased its production to 135,000 barrels per day (b/d) in 2023, and we expect Chevron's output in Venezuela to reach 200,000 b/d by the end of 2024.

How many refineries are in Venezuela?

Of Venezuela's six refineries, only five remain operational, all running at no more than 20% of total capacity. The country's aging refining system, plagued by frequent shutdowns and low output, has deteriorated after years of underinvestment, poor management and international sanctions that have limited access to spare parts.

Venezuela's oil isn't just abundant, it's a different kind of crude. American crude is more like olive oil. Venezuela's is basically molasses.

These upgraders improve or upgrade heavy and extra heavy crude oil (EHCO) into a synthetic or syncrude readily digested by a number of refineries specifically placed on the ...

Venezuela's second-largest oil refinery, called Card#243;n, stopped working on June 23, 2025, because of a
