-----  
Are battery enclosures rated IP65 or IP66?

Commonly, battery enclosures are rated as IP65, IP66--also NEMA 3R or 4/4X. Here is what this all means. IP65 means that the enclosure is dust-tight and protects from weak jets of water. This is great for normal outdoor weather. IP66 provides a little more water protection, withstanding more powerful jets of water.

What is an IP66 electrical enclosure?

IP66 electrical enclosures are equivalent to NEMA 4 and NEMA 4X enclosures. International Protection (IP) standards are used to designate the protective capacity of an electrical enclosure. The two-digit code shows the protection against particles (the first digit) and water (the second digit).

What are the features of IP66 cabinets?

Features of our IP66 cabinets include: - Complete protection from solid objects of any kind. - High pressure jets from all directions, (limited ingress permitted). - Enclosure can be hosed down, eg. Ship decks. Often called rain tight enclosures due to their excellent weather resistance.

What materials are used for weatherproof battery enclosures?

The materials used for weatherproof battery enclosures are not different from materials used for other types of enclosures. Metal battery enclosures include those manufactured from carbon (mild) steel, galvanized steel, and stainless steel- usually of the grades 304, 316, or 316L. Carbon steel is usually duller than stainless steel.
