What is a humidity control cabinet?

The use of humidity control cabinet systems is becoming more important within a range of different industry applications, allowing temperature sensitive components to be stored at a selected relative humidity and constant temperature profile.

Should data center temperature and humidity be monitored closely?

It is absolutely critical that data center temperature and humidity is monitored closely to provide for both maximum uptime and maximum hardware life. If your company is not proactively monitoring both temperature and humidity in your data center or server room, please contact us today.

How are humidity controlled storage cabinets and drying cabinets related?

Humidity controlled storage cabinet systems and drying cabinets are related to one another due to the rate at which the humidity level can be controlled. Desiccator cabinets, or desiccant dry boxes, are appliances which have a drying substance in them that acts to both remove water and protect the items from water in the ambient air.

Are self cooling cabinets a good choice for a data center?

Capable of providing up to 4 kW of cooling, these self cooling cabinets with NEMA rated air conditioners protect the delicate electronics inside from heat, dirt, moisture, and tampering. Simply put, these cabinets are a cost-effective alternative to installing a data center with a climate-controlled cooling system.

With advanced environmental barrier control and durable construction, our climate-controlled cabinets provide protection against heat, dust, water, ...

McDry dry cabinets provide ultra-low humidity and moisture-proof storage for MSL components, IC packages, and sensitive electronics. Proper storage eliminates the risk of ...
