What is a server rack?

Server rack is a framework for the organized hosting of servers, storages and network equipment in a data center. A full rack provides from 42 to 47 units - cells for placing equipment. You can rent the entire rack or each individual unit in it to house a server.

Can I rent a rack in a data center?

Physical protection of racks. In the data center you can rent both: open and individually locked racks. You can get to the server hardware only if the lessee (owner of the hardware) issues a temporary code for short-term access.

What size Cabinet does a server rack have?

Server racks are housed in a 19" cabinet with an individual lock. Access to the hardware can only be authorized by the renter. When the cabinet is opened, the owner of the hardware always gets a security notification of unauthorized access. What additional services do you offer?

Can I rent a rack for a server?

You can rent the entire rack or each individual unit in it to house a server. Regardless of the number of rented units in the rack, the client is provided with a full package of services for the use of hardware capabilities, uptime, hardware monitoring, technical and service support.
