---

Developers and power plant owners plan to significantly increase utility-scale battery storage capacity in the United States over the next three years, reaching 30.0 ...

Altogether, the US has added over 20 gigawatts of battery storage capacity to its electric grid since 2020, according to recent data from the Energy Information Administration ...

The US battery storage market set another record in 2024, installing 12.3 gigawatts (GW) of new capacity across all sectors, according to a new report from the ...

In 2024, the U.S. reached 26 GW of utility-scale battery storage, adding 10.4 GW that year, reports the US Energy Information Administration. Despite rapid growth, battery ...

According to the U.S. Energy Information Administration's (EIA) latest Preliminary Monthly Electric Generator Inventory, the country ...

Support CleanTechnica's work through a Substack subscription or on Stripe. We expect 63 gigawatts (GW) of new utility-scale electric-generating capacity to be added to the ...

Altogether, the US has added over 20 gigawatts of battery storage capacity to its electric grid since 2020, according to recent data ...

Through Q1 2024, U.S. businesses have installed nearly 40 gigawatts (GW) of onsite and off-site solar capacity. Total corporate storage use exceeds 1.8 gigawatt-hours ...

With the rise of solar and wind capacity in the United States, the demand for battery storage continues to increase. The Inflation ...

Last year was fantastic for battery storage. This year is poised to be even better. The U.S. grid battery sector has been on a tear in ...

cumulative output and capacity of battery storage installed in the US have reached 17,027MW and 45,588MWh, respectively. That meant an 86% increase in cumulative installed capacity in ...

And it looks achievable for the youngest sector of the power industry. The analysts at the federal Energy Information Agency predict that the total battery capacity installed on the ...

The United States has decisively surpassed its aggressive 2025 target for grid-scale battery storage, crossing 40 gigawatts of installed capacity in the third quarter of 2025.

In 2025, capacity growth from battery storage could set a record as operators report plans to add 19.6 GW of utility-scale battery storage to the grid, according to our ...

In the U.S., utility-scale battery storage capacity is expected to double to around 40 gigawatts by 2025, if projects that are currently planned go into operation, The Guardian ...

In the United States, cumulative utility-scale battery storage capacity exceeded 26 gigawatts (GW) in 2024, according to our January 2025 Preliminary Monthly Electric ...

In fact, the sector is off to its best-ever start to a year. In the first quarter of 2024, nearly 1.3 gigawatts (GW) of battery storage was ...

In fact, the sector is off to its best-ever start to a year. In the first quarter of 2024, nearly 1.3 gigawatts (GW) of battery storage was installed at power plants, homes, and ...
