“A city's energy resilience starts with smart storage,” says Dr. Oleksiy Petrov, lead researcher at the Kyiv Energy Institute. “Our 2023 study shows storage systems can reduce grid instability ...

Wait, no - actually, recent data shows solar curtailment reached 41% in Mykolaiv Oblast this March [2]. That's enough wasted energy to charge 800,000 EVs daily. The real tragedy? ...

The building of the pumped-storage power plant is connected with the upper basin by 6-pressure reinforced concrete and metal pipelines with a diameter of 3.8 m. The upper basin was created ...

Meet the energy storage charging pile - the Swiss Army knife of EV infrastructure that's quietly solving our biggest charging headaches. Unlike regular chargers, these smart ...

The energy storage capacity of a charging pile significantly influences its charging speed and overall efficacy. Systems with a higher storage capacity can deliver more energy ...

Are charging piles compatible with mainstream charging interfaces? In the chaos of charging standard rivers and lakes, the charging pile operators that provide charging services for cars ...

According to the charging pile of new energy vehicles, it can be divided into fast charging and slow charging. ... Can 2023 energy storage investment continue its glory?

Enter energy storage charging pile containers - the Swiss Army knives of EV infrastructure. These modular systems combine lithium-ion batteries, smart grid tech, and ...

Construction took place from March to August 2025 and cost DTEK EUR125 million. The total storage capacity of the system reaches 400 MWh, which is sufficient to power up to ...

Several gas storage facilities in the east have faced operational limitations or been damaged by Russia's invasion, but the bulk of gas storage is in western Ukraine.

Our 1 GW project combines gas, solar, and battery storage to secure Kyiv's grid, cut emissions, and support critical services. Explore investment in this high-impact initiative.

The global energy storage market, already worth \$33 billion [1], is now colliding with hydrogen infrastructure to create something revolutionary - the hydrogen charging pile ecosystem.

With global EV sales hitting 10 million units in 2022, even your grandma might be Googling charging solutions. This article breaks down energy storage smart charging pile ...

Ever wondered why your smartphone battery dies faster than your enthusiasm for gym memberships? Now imagine scaling that power anxiety to electric vehicles (EVs). This is ...

Are you looking to understand electric vehicle charging piles and their common indicators and functional descriptions? In this article, we will break down the simple technical ...

Kyiv and Moscow agreed this week to a 30-day cease-fire on strikes against energy infrastructure, the first major step toward de-escalation in more than three years of war.

New energy storage project in Kiev DTEK and Fluence have begun commissioning Ukraine's largest battery energy storage system, a 200 MW/400 MWh installation spread across six sites ...

IT WAS THE fourth day without power in Vyshhorod, a town north of Kyiv, and in the reception area of the town hall dozens of locals sat around spaghetti-like piles of cables ...
