Is vanadium good for flow batteries?

Vanadium is ideal for flow batteries because it doesn't degrade unless there's a leak causing the material to flow from one tank through the membrane to the other side. Even in that case, MIT researchers say the cross-contamination is temporary, and only the oxidation states will be affected.

Are there any vanadium flow batteries in the United States?

The United States has some vanadium flow battery installations, albeit at a smaller scale. One is a microgrid pilot project in California that was completed in January 2022.

Are redox flow batteries cheaper than lithium ion?

Overall we think that for long-duration, grid-scale electricity storage, redox flow batteries are looking more economical than lithium ion, especially once storage durations surpass 6-8 hours. Our comparison file is here. This data-file contains a bottom-up build up of the costs of a Vanadium redox flow battery.

How much does a redox flow battery cost?

The purpose of this data-file is to build up the costs of redox flow batteries, starting from first principles, for Vanadium redox flow batteries. A 6-hour redox flow battery costing \$3,000/kW would need to earn a storage spread of 20c/kWh to earn a 10% return with daily charging and discharging over a 30-year period of backstopping renewables.
