What does the Seychelles government do?

The Seychelles Government is committed to providing adequate, reliable and affordable energy to meet future energy consumption needs and to underpin strong economic growth through consumable energy initiatives. The Seychelles enjoy favourable conditions for renewable energy (RE) resources, such as wind and solar.

What is the Seychelles energy plan?

It targets an ambitious transformation and diversification of the Seychelles' currently 85 MW diesel-dominated electricity generation capacity (on Mahé, Praslin and La Digue), aiming at replacing diesel generators with domestic and international public and private financing.

Will the energy system be decarbonised by 2035?

Notwithstanding the above national commitment, the Ministry is preparing the strategic Roadmap towards a much-accelerated transformational change with the result that the energy system is decarbonised and is based on (close to) 100% renewable energy resources by 2030, and fully 100% renewable energy by 2035 when E-mobility is considered.

To date, affordable and effective solar and battery storage systems have opened up new possibilities for the archipelago, particularly in its high-end tourism sector.

To date, affordable and effective solar and battery storage systems have opened up new possibilities for the archipelago, particularly ...

a tropical paradise where coconut trees sway... and solar panels glint under the sun. Seychelles, like many island nations, faces a unique energy puzzle - how to keep the ...

The Seychelles Energy Storage Project Expansion demonstrates how island nations can achieve energy
