How does a virtual power plant work?

Our sophisticated software monitors and remote-controls in real-time distributed energy resources with a total capacity of several gigawatts. The Virtual Power Plant digitally connects renewable and conventional energy sources as well as various types of storage systems and demand-side resources.

What is VPP (virtual power plant)?

Payable after the fact as a penalty when a power producer experiences a discrepancy between planned and actual generation values. VPP (virtual power plant) is a new concept of energy supply service which uses multiple distributed energy resources that can be remotely controlled by IoT equipment, and it works as one power plant.
